Meet SAM

SAM is Simple

SAM is a hub to control home and office devices and appliances in just one click of a button. Although straightforward in design, it is flexible enough to be customized based on your preferences.

SAM is Automated

SAM integrates its system to devices in your home or office. Unlike other smart home systems, you can link SAM to your existing appliances and avoid the extra cost of buying devices that are compatible to your home automation system.

SAM is Mobile

SAM allows you to remotely control your home or office through your mobile phone and tablet. Secure and monitor your home by receiving alarms and notifications, and view videos real-time.

Why SAM?

Interoperability

Unlike home automation systems, SAM has found a way to make sure its smart gadgets interact effectively with your existing household devices. No need to change your appliances, SAM will adjust to your current home or office situation.

Accessibility

Control SAM from anywhere in the world through your mobile phone or tablet! Get real time updates and control your home whether you're driving, having lunch, partying late at night, or on your dream vacation. It's like being home away from home.

Expandability

Don't be limited to the basic package. If you enjoy the comfort of having SAM in your home, you can be assured that the team is consistently innovating products that you can add to your expanding smart home. Buy smart devices in bulk or per piece depending on what you prefer or need at the moment.

Get your smart devices in bundle or solo; the choice is up to you! Grow your devices as you go. Add according to your lifestyle: how you want to live, how you want to be comfortable.

SAM FAQs

Q: What devices are commonly controlled by SAM?

A: Light Switches, Outlets, Curtains, and Cameras are few examples of what SAM could control. In addition, there are also sensors that can be used as triggers. For instance, SAM can turn on the light when the front door is opened, or detects motion.

Q: Do I need to buy everything for my house to be able to use SAM?

A: You can start using SAM as long as you have the SAM gateway and atleast 1 SAM Device. You don't need to buy SAM devices for every outlet of your place in the beginning and you can gradually add more SAM devices to your home or office overtime.

Q: Do I need to rewire my place to be able to use SAM at home or my office?

A: There's no major or almost no rewiring needed. You just need to replace your existing device with a SAM device for you to be able to use SAM but this is still subject to inspection prior to installation.

Q: Can I install the SAM devices on my own?

A: You can, however, we suggest you let an authorized SAM integrator do it since we recommend an inspection prior to installation. You can shoot us an email via info@samtechnologies.ca to schedule an inspection and we will gladly connect you to one of our integrators/installers.

Q: How long does it take to install SAM?

A: The time it takes to install the SAM devices depend entirely on what you're installing and how many devices you're working with. Generally, though, it shouldn't take more than a few hours to install and program a couple of gadgets.

SAM has a separate app for it's camera called "SAM EYE". You can use SAM EYE to monitor your home or office while you're away.
